Sorting the railway station and rail  
schemes to develop technology to  
improve performance

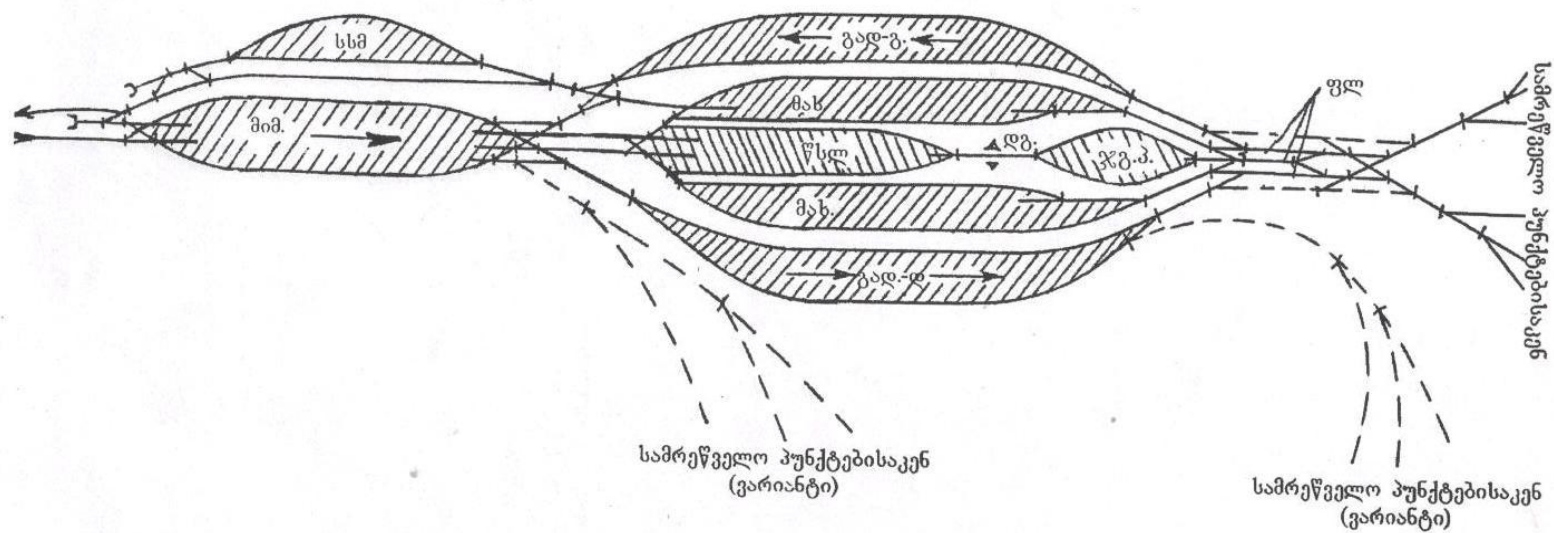

Student: Tinatin Goreziani

In modern conditions industrial sorting stations perform large manoeuvre works details of their wagons and some sort of industrial, factories, workshops and facilities for purposes of selection in terms of freight.

Industrial sorting stations in terms of the existing schemes often performed re-sorting operations of wagons, which leads to an increase in the delay. Therefore, it is necessary to improve stations schemes and work technology.

The requirements of us have developed a progressive schemes an industrial hill sorting station, which significantly accelerates manoeuvre operations and reduce delay of the wagons in various of terms, as well as annual operating costs.
