

# Public Lecture

Prof. em. Otto Schult  
Forschungszentrum Jülich

## **International cooperation - driven by science and constrained by politics (Happy periods in life)**

It is a privilege – arguably a responsibility – of the elderly to impart their knowledge and experience to the young, may it be our own children, pupils and students or, e.g., the next generation of scientists. In this way, we may help them to avoid some mistakes or stupidities we have made and, hopefully, encourage them to find their way toward a successful and happy life.

As an old, grateful and happy person, in my talk I would like to share with you some of my thoughts, insights and incidents and give a few summarizing recommendations.

Prof. Dr. O.W.B. Schult

Director at the Institute for Nuclear Physics (IKP-2) of Forschungszentrum Jülich (FZJ) from 1972 – 1998; scientific leader of two large international collaborations at the Cooler Synchrotron COSY (COSY-13 and ANKE); initiator – together with Prof. M. Nioradze (TSU) – of the cooperation between HEPI/TSU and FZJ in 1992.
